Project Proposal Year IV

Student Name:	Sofiia Pankiv	Student Number:	C00301189
Working Title:	Interactive Poster Generator		
Description:	One of the most common problems for designers is an inspiration. It may take quite a big amount of time to find the right reference to start with their own projects. So this website will help beginners to practise by being challenged by randomiser to make the things it put together work out. How the website will work: - When the user will open the website there will be 2 options: Create yourself or Randomiser. - If user will choose the first option, there will be menu with canvas on top in the size of A4 and under there will be a choice of graphic elements that user will be able to use and they will be able to add only 3 elements from all possible. - Colours which user will chose by using a pallet like in the photoshop, - User will be able to add a short text element and they will be able to chose the font, size and colour of it before positioning in on the canvas. - After this user will be able to add a texture to it - After putting everything togetherness the poster will be able to be downloaded from the website. - If user will choose the randomiser then the website will put everything together by itself and user will be able to download it. The target audience will be mostly graphic design students, graphic design beginners and other users who will need an inspiration for their projects. The goal is to show how graphic design tool can be interactive and how it can be used in the early stages of the creative process.		
Reasons for selecting project:	- I'm interested in graphic design as such creating posters. - Project combines my skills in graphic design and coding. - It gives an opportunity to experiment with colours, textures, composition and typos.		
Proposed research content:	- Composition and poster design - Latest style trends - Coding: - o Html - o CSS - o JavaScript - o Algorithms for randomising
